

WEB BASED STOREFRONT

A PROJECT REPORT

Submitted by:

Abhik Gupta (09514902021)

John P Varghese (04714902021)

Yatin Hooda (02914902021)

Nishchay Chandok (35914902021)

In partial fulfillment for the award of the degree

of

BACHELOR OF COMPUTER APPLICATION

MAHARAJA SURAJMAL INSTITUTE
C4, JANAKPURI, NEW DELHI – 110058

DECEMBER 2023

DECLARATION

We affirm that this submission is the result of our individual effort, and we attest that, to the best of our knowledge and belief, it does not incorporate any material previously published or authored by another individual. Furthermore, we confirm that this work has not been utilized in whole or in part for the completion of any other academic degree or diploma from any university or educational institution. Any instances where external contributions have been acknowledged are duly cited within the text.

BONAFIDE CERTIFICATE

I certify that the project report titled "**WEB BASED STOREFRONT**" is a bonafide, authentic and genuine work and hard work of the team comprising "**Abhik Gupta, John P Varghese, Yatin Hooda, and Nishchay Chandok**". This team diligently conducted the project under my supervision, and I can attest to the integrity and originality of their work.

SUPERVISOR

Mr. Sundeep Kumar
Assistant professor
Dept. of Computer Application

SIGNATURE OF SUPERVISOR

SELF CERTIFICATE

This is to certify that the dissertation/project report entitled "**WEB BASED STOREFRONT**" is done by me is an authentic work carried out for the partial fulfilment of the requirements for the award of the degree of Bachelor of Computer Applications under the guidance of "**Mr. Sundeep Kumar**". The matter embodied in this project work has not been submitted earlier for award of any degree or diploma to the best of my knowledge and belief.

ABHIK GUPTA

09514902021

(TEAM LEADER)

ACKNOWLEDGEMENT

Certified We would like to take this opportunity to acknowledge everyone who has helped us in every stage of this project.

We extend our heartfelt appreciation to all those who contributed to the successful realization of this project. A special acknowledgment goes to **Mr. Sundeep Kumar** from the **Department of Computer Science** for his invaluable guidance and insightful suggestions, which played a pivotal role in bringing this project to fruition. We are sincerely grateful for his unwavering support.

Furthermore, our sincere thanks go to our esteemed **Director, Dr. Harish Singh**, whose provision of essential facilities significantly contributed to the seamless completion of this project. We express our gratitude for his support and encouragement throughout the entire process.

ABHIK GUPTA

SYNOPSIS

OBJECTIVE

The objective of Vendr, a comprehensive e-commerce application developed using the MERN (MongoDB, Express.js, React.js, Node.js) stack, is to provide users with a seamless and intuitive platform for buying and selling goods online. By leveraging modern web development technologies such as React and Redux for the frontend, Node.js and Express for the backend, and MongoDB Atlas for cloud-based data storage, Vendr aims to deliver a highly responsive and scalable e-commerce experience. Integrating SquareUp for secure payment processing, Nodemailer for efficient email communication, and JWT (JSON Web Tokens) along with passport for robust authentication, Vendr ensures a secure and reliable environment for both buyers and sellers.

SCOPE

The objective of Vendr, a comprehensive e-commerce application developed using the MERN (MongoDB, Express.js, React.js, Node.js) stack, is to provide users with a seamless and intuitive platform for buying and selling goods online. By leveraging modern web development technologies such as React and Redux for the frontend, Node.js and Express for the backend, and MongoDB Atlas for cloud-based data storage, Vendr aims to deliver a highly responsive and scalable e-commerce experience. Integrating SquareUp for secure payment processing, Nodemailer for efficient email communication, and JWT (JSON Web Tokens) along with passport for robust authentication, Vendr ensures a secure and reliable environment for both buyers and sellers.

SUMMARY

Vendr is a feature-rich e-commerce application designed to streamline the online shopping experience for both buyers and sellers. Leveraging the power of the MERN stack, Vendr offers a responsive and scalable platform that caters to the diverse needs of modern e-commerce. With secure authentication mechanisms, robust payment processing, and efficient email functionality, Vendr prioritizes user security and satisfaction. Whether it's browsing through a vast array of products, making secure transactions, or managing orders with ease, Vendr provides a comprehensive solution for all e-commerce requirements. By harnessing cutting-edge technologies and adhering to best practices, Vendr sets a new standard for online retail platforms, promising a seamless and enjoyable shopping experience for users worldwide.

WHAT IS VENDR?

Vendr is a dynamic and fully functional e-commerce application crafted to revolutionize the online shopping experience. At its core, Vendr is a sophisticated platform that connects buyers and sellers in a seamless digital marketplace. Built using the MERN (MongoDB, Express.js, React.js, Node.js) stack, Vendr boasts a modern and intuitive user interface powered by React and Redux, ensuring a smooth and responsive browsing experience. With Express.js handling API requests and MongoDB Atlas providing a secure cloud-based database solution, Vendr offers a robust infrastructure that supports the entire e-commerce process, from product discovery to order fulfillment. By integrating SquareUp for secure payment processing, Nodemailer for efficient email communication, and JWT with passport for authentication, Vendr prioritizes user security and satisfaction, setting a new standard for online retail platforms.

WHY DID WE CHOOSE VENDR?

Vendr was chosen as a project for its potential to address the growing demand for innovative e-commerce solutions. In today's digital age, online shopping has become an integral part of daily life for millions worldwide. However, existing e-commerce platforms often lack the customization, security, and scalability needed to meet the evolving needs of both buyers and sellers. By developing Vendr, we aimed to fill this gap by creating a comprehensive e-commerce solution that leverages cutting-edge technologies and best practices. Vendr's modular architecture and extensive feature set make it an ideal choice for businesses looking to establish or enhance their online presence. Moreover, by open-sourcing Vendr, we encourage collaboration and contribution from the developer community, fostering innovation and continuous improvement in the realm of e-commerce technology. Ultimately, choosing Vendr as a project aligns with our commitment to delivering impactful and scalable solutions that empower businesses and elevate the online shopping experience for consumers worldwide.

REQUIREMENTS

HARDWARE REQUIREMENTS

1. Servers with adequate CPU, RAM, and storage resources to accommodate anticipated traffic and data storage needs.
2. Reliable network infrastructure including routers, switches, and firewalls for seamless communication.
3. Consideration of a load balancer for distributing incoming requests across multiple servers, particularly for scalability.
4. Compatibility with hardware associated with integrated payment gateways like SquareUp, such as card readers or terminals.

SOFTWARE REQUIREMENTS

1. Compatible operating system (e.g., Linux, Windows Server) installed on servers.
2. Node.js and npm (Node Package Manager) for running the backend application.
3. MongoDB for database management, either installed locally or hosted on MongoDB Atlas.
4. Express.js for building backend APIs and handling HTTP requests.
5. React and Redux libraries for frontend development, ensuring interactive user interfaces and efficient state management.
6. Integration of SquareUp SDK for secure payment transactions.
7. Nodemailer for handling email functionalities such as sending order confirmations and notifications.
8. Authentication managed using JWT (JSON Web Tokens) and Passport.js.
9. Deployment facilitated by tools like Vercel or Docker for production environments.

10. Implementation of monitoring and logging tools for tracking application performance and troubleshooting issues effectively.
11. This combination of hardware and software provides a robust infrastructure capable of supporting the complex requirements of modern e-commerce application development, ensuring that the team can develop, test, and deploy efficiently and effectively.

ABSTRACT

Embarking on the Vendr project has been an exhilarating journey into the heart of e-commerce innovation. Vendr stands as a testament to our dedication to crafting a cutting-edge platform that redefines the online shopping experience. Leveraging the power of the MERN (MongoDB, Express.js, React.js, Node.js) stack, Vendr represents a fusion of modern technology and user-centric design, aimed at empowering both buyers and sellers in the digital marketplace.

At its core, Vendr embodies a comprehensive suite of features meticulously crafted to meet the diverse needs of our users. With a strong emphasis on scalability, security, and seamless functionality, Vendr offers an intuitive platform for browsing, purchasing, and managing products effortlessly. From secure user authentication to efficient order processing, every aspect of Vendr is designed to enhance the user experience and drive business growth.

As we continue to refine and expand Vendr, our vision extends beyond mere transactions to fostering meaningful connections and experiences. Future enhancements such as multi-vendor support, social commerce integration, and personalized recommendations exemplify our commitment to staying at the forefront of e-commerce innovation. With Vendr, we are not just building a platform; we are shaping the future of online retail, one innovative feature at a time.

WORKING OF THE APPLICATION

1. Vendr prioritizes users and works on a User Centric mode.
2. Users can start with a smooth sign-up process where they are needed to provide essential details like email and password on the Sign-Up Page.
3. Upon successful registration, users are automatically logged in. Returning users can log in through the Login Page, where they enter their email and password for secure login using JWT and PassportJS for end-to-end encryption and authentication.
4. The user interface is intuitive after logging in.
5. Users are greeted with a product listing page showcasing a variety of products across categories and brands. For a large number of products, the application presents a paginated view.
6. Users can sort results based on price and ratings.
7. Users can also categorize items based on product category or brand.
8. Two additional pages are accessible through the Navbar: "About Us" and "Contact Us." The "About Us" page is a static page with a brief application description. The "Contact Us" page has a form with a single input field for users to enter their queries to be sent to admins.
9. To purchase a product, users click on the desired item, which opens the product description page.
10. The product description page offers a detailed view, including highlights, description, price, ratings, multiple images, and available sizes and colors.

11. Users can simply choose a color and size and click "Add to Cart" to add the product to their cart.
12. After adding products, users can access the cart through the cart button in the Navbar for a final review before checkout.
13. On the cart page, users can modify the quantity of an item or even remove it entirely from the cart.
14. Once users finalize their cart, they can proceed to checkout by clicking the checkout button.
15. The checkout page offers a form at the top to add a delivery address if not already provided. Once an address is added, users can select it from their saved addresses and choose a payment method.
16. Two payment methods are available: Cash and Card. Cash payments confirm the order immediately. Card payments open a dedicated payment gateway to complete the transaction and confirm the order upon successful payment.
17. Upon successful order placement, an invoice with the product list, subtotal, and individual product prices is sent to the email address provided during checkout.
18. Once the order is confirmed, users can view a detailed view of the order from the "My Orders" page accessible through the User Icon at the top right. This page displays the order, subtotal, total number and description of products ordered, along with the order status.

19. The User Icon at the top right also provides access to the "My Profile" page where users can view their saved email, phone number, and addresses, and even edit or remove this data.
20. Users can log out of the application by clicking the User Icon at the top right and then selecting "Sign Out."
21. The application also provides an "Admin Panel" accessible through an Admin account login.
22. Upon logging in with an Admin account, the admin can perform everything a regular user can, such as purchasing items, viewing the "My Profile" page, or viewing the "My Orders" page. However, the Admin Panel has three additional options: "Admin Products," "Admin Orders," and "Admin Queries."
23. The "Admin Products" page displays the entire product listing with an "Edit Product" button for each product. Clicking this button opens a page form where the admin can edit product details. The "Admin Products" page also has an "Add Product" button at the top, which opens a form page for the Admin to add a new product.
24. The "Admin Orders" page displays all orders created by various users, along with each order's ID, purchased items, payment method, delivery address, payment status, and order status. The Admin can also update the Order status and Payment status of any order from this page.

25. The "Admin Queries" page displays all queries submitted by regular users through the "Contact Us" section.
26. If a user or admin forgets their password while logging in, they can simply click the "Forgot Password Button" on the Login Page. Here, they can enter their email address, and an email will be sent with a link that brings the user back to the application to set a new password, which ultimately changes the user's password upon submission.

TECH STACK USED FOR DEVELOPMENT

PROJECT STRUCTURE:

1. Client-Side (Frontend):

- a. Developed using React, React Router DOM, and various UI libraries like Tailwind for enhanced functionality and user experience.
- b. Used React Redux to handle states and a store to manage the application's frontend organized and feature-rich.

2. Server-Side (Backend):

- a. Built on Node.js and Express, facilitating the creation of a scalable and efficient server.
- b. Utilizes MongoDB as the database, with Mongoose for data modeling and interactions.
- c. Employs Babel for ECMAScript compatibility and provides additional middleware for features like compression, CORS, and validation.

3. Note:

- a. The technology stack combines the strengths of React and Redux for the dynamic frontend, Node.js and Express for the robust backend, MongoDB for flexible and scalable data storage, and various libraries and tools to enhance functionality, security, and development efficiency. This stack ensures a modern, efficient, and scalable architecture for the Vendr project.

FRONTEND DEPENDENCIES (CLIENT):

1. `@headlessui/react`

- Version: ^1.7.18
- Description: `@headlessui/react` is a library that provides accessible and composable React components for building user interfaces without styling constraints.

2. `@heroicons/react`

- Version: ^2.1.3
- Description: `@heroicons/react` offers a set of customizable React components for incorporating Heroicons, a collection of free SVG icons, into your React applications.

3. `@reduxjs/toolkit`

- Version: ^1.9.7
- Description: `@reduxjs/toolkit` is a package that simplifies Redux usage by providing utilities for writing Redux logic, including reducers, actions, and middleware, in a more efficient and ergonomic manner.

4. `@stripe/react-stripe-js`

- Version: ^2.7.0
- Description: `@stripe/react-stripe-js` facilitates integration with the Stripe payment platform in React applications, allowing for secure and seamless payment processing.

5. `@stripe/stripe-js`

- Version: ^3.3.0
- Description: `@stripe/stripe-js` is the Stripe JavaScript library for handling client-side interactions with Stripe, such as creating payment methods and handling card validations.

6. `@tailwindcss/aspect-ratio`

- Version: ^0.4.2
- Description: `@tailwindcss/aspect-ratio` is a Tailwind CSS plugin that provides utilities for creating responsive aspect-ratio boxes, allowing for consistent sizing of elements based on aspect ratios.

7. [@tailwindcss/forms](#)

- Version: ^0.5.7
- Description: [@tailwindcss/forms](#) is a Tailwind CSS plugin that provides styles for form elements, such as input fields, checkboxes, and radio buttons, ensuring consistent and customizable form styling.

8. [@testing-library/jest-dom](#)

- Version: ^5.17.0
- Description: [@testing-library/jest-dom](#) offers Jest matchers for asserting expectations on DOM elements, making it easier to write and maintain test cases for React components.

9. [@testing-library/react](#)

- Version: ^13.4.0
- Description: [@testing-library/react](#) provides utilities for testing React components, including rendering components, interacting with them, and querying the DOM for testing purposes.

10. @testing-library/user-event

- Version: ^14.5.2
- Description: `@testing-library/user-event` offers utilities for simulating user interactions, such as clicking, typing, and navigating, in testing environments, allowing for comprehensive testing of user interactions in React components.

11. json-server

- Version: 0.17.0
- Description: `json-server` is a lightweight server that serves JSON data over HTTP, making it useful for mocking APIs and simulating backend services during development and testing.

12. react

- Version: ^18.2.0
- Description: React is a JavaScript library for building user interfaces, providing a declarative and component-based approach to building interactive web applications.

13. react-dom

- Version: ^18.2.0
- Description: react-dom is a package that provides DOM-specific methods for working with React components, enabling rendering of React applications in web browsers.

14. react-hook-form

- Version: ^7.51.3
- Description: react-hook-form is a library for building performant and flexible forms in React applications, offering hooks-based form validation and management capabilities.

15. react-loader-spinner

- Version: ^6.1.6
- Description: react-loader-spinner provides customizable loading spinners for React applications, offering visual feedback to users during asynchronous operations and data loading processes.

16. react-redux

- Version: ^8.1.3
- Description: react-redux is the official React bindings for Redux, enabling integration of Redux state management with React components, allowing for efficient and predictable management of application state.

17. react-router-dom

- Version: ^6.22.3
- Description: react-router-dom provides routing and navigation functionalities for React applications, allowing for declarative and dynamic routing of components based on URL paths.

18. react-scripts

- Version: 5.0.1
- Description: react-scripts is a set of scripts and configuration files for bootstrapping and running React applications, including development servers, build scripts, and testing utilities.

19. react-square-web-payments-sdk

- Version: ^3.2.1
- Description: react-square-web-payments-sdk facilitates integration with Square's Web Payments SDK in React applications, enabling secure and streamlined payment processing using Square's payment platform.

20. react-toastify

- Version: ^10.0.5
- Description: react-toastify provides toast notification capabilities for React applications, offering customizable and user-friendly notifications for displaying messages, alerts, and feedback to users.

21. web-vitals

- Version: ^2.1.4
- Description: web-vitals is a library for measuring and reporting essential performance metrics of web pages, including metrics such as First Contentful Paint (FCP), Largest Contentful Paint (LCP), and Cumulative Layout Shift (CLS).

BACKEND DEPENDENCIES (SERVER):

1. cookie-parser

- Version: ^1.4.6
- Description: cookie-parser is a middleware for parsing cookies in Express applications, enabling easy access to cookie data in request objects.

2. cors

- Version: ^2.8.5
- Description: cors is a middleware for enabling Cross-Origin Resource Sharing (CORS) in Express applications, allowing for controlled access to resources from different origins.

3. dotenv

- Version: ^16.4.5
- Description: dotenv is a module for loading environment variables from a .env file into Node.js applications, providing a convenient way to manage configuration settings.

4. express

- Version: ^4.19.2
- Description: express is a fast, unopinionated, and minimalist web framework for Node.js, providing a robust set of features for building web applications and APIs.

5. express-session

- Version: ^1.18.0
- Description: express-session is a middleware for managing session data in Express applications, enabling the creation and management of user sessions with session-based authentication.

6. jsonwebtoken

- Version: ^9.0.2
- Description: jsonwebtoken is a library for generating and verifying JSON Web Tokens (JWT) in Node.js applications, facilitating secure authentication and authorization mechanisms.

7. mongoose

- Version: ^8.3.2
- Description: mongoose is an Object Data Modeling (ODM) library for MongoDB and Node.js, providing a schema-based solution for modeling application data and interacting with MongoDB databases.

8. nodemailer

- Version: ^6.9.13
- Description: nodemailer is a module for sending email messages from Node.js applications, offering a simple and efficient API for configuring and sending emails via SMTP or other transport methods.

9. nodemon

- Version: ^3.1.0
- Description: nodemon is a utility for automatically restarting Node.js applications when file changes are detected, providing a convenient development workflow for server-side development.

10. passport

- Version: ^0.7.0
- Description: passport is an authentication middleware for Node.js applications, offering a flexible and modular approach to implementing authentication strategies, such as OAuth, JWT, and local authentication.

11. passport-jwt

- Version: ^4.0.1
- Description: passport-jwt is a Passport strategy for authenticating with JSON Web Tokens (JWT) in Node.js applications, enabling secure and stateless authentication mechanisms using JWT tokens.

12. passport-local

- Version: ^1.0.0
- Description: passport-local is a Passport strategy for authenticating with a username and password in Node.js applications, providing a simple and customizable approach to implementing local authentication.

13. path

- Version: ^0.12.7
- Description: path is a core module in Node.js for working with file and directory paths, providing utilities for resolving, joining, and manipulating file paths in a platform-independent manner.

14. stripe

- Version: ^15.4.0
- Description: stripe is a Node.js library for interacting with the Stripe API, enabling integration with Stripe's payment platform for processing payments, managing subscriptions, and handling other e-commerce functionalities.

SOFTWARE REQUIREMENT SPECIFICATIONS

(SRS)

Functional Requirements:

1. **User Registration and Authentication:** Users should be able to register for an account securely, providing essential details such as email address and password. The system should authenticate users upon login, ensuring only authorized access to user accounts.
2. **Product Management:** The platform should support comprehensive product management functionalities for administrators, allowing them to add, edit, and delete products. Users should be able to browse and search for products based on various criteria, such as category, price range, and brand.
3. **Shopping Cart and Checkout:** Users should be able to add products to their shopping cart, review items, adjust quantities, and proceed to checkout seamlessly. The checkout process should support multiple payment methods, including credit/debit cards, digital wallets, and cash on delivery.
4. **Order Management:** The system should facilitate efficient order management for both users and administrators. Users should be able to track order statuses, view order history, and receive email notifications for order updates. Administrators should have tools to manage orders, update statuses, and handle customer inquiries.

5. **User Profile Management:** Users should have access to a profile page where they can view and edit their personal information, such as email address, phone number, and delivery addresses. Administrators should also have access to user profiles for administrative purposes.
6. **Admin Panel:** The system should provide administrators with a dedicated admin panel for managing various aspects of the platform, including product listings, orders, and user accounts. The admin panel should offer functionalities such as product CRUD operations, order tracking, and user management.

Interface Requirements:

1. **User-Friendly Interface:** The user interface should be intuitive and easy to navigate, providing a seamless shopping experience for users of all levels of technical proficiency.
2. **Responsive Design:** The application should be accessible across various devices and screen sizes, including desktops, laptops, tablets, and smartphones. The interface should adapt dynamically to different screen resolutions and orientations.
3. **Clear Product Presentation:** Product listings should include clear and concise information, including product images, descriptions, prices, and availability. Users should be able to easily browse and filter products based on their preferences.

4. **Shopping Cart and Checkout Process:** The shopping cart interface should display a summary of selected items, with options to adjust quantities and remove items as needed. The checkout process should be streamlined and include clear prompts for entering delivery information and selecting payment methods.
5. **Order Tracking:** Users should be able to track the status of their orders through a dedicated interface, providing real-time updates on order processing, shipping, and delivery.
6. **Admin Panel Interface:** The admin panel interface should provide administrators with access to a range of management tools, including product management, order processing, and user account management. The interface should be organized and user-friendly, allowing administrators to perform tasks efficiently.

Performance Requirements:

1. **Response Time:** The system should respond to user interactions, such as browsing products, adding items to the cart, and completing orders, within acceptable time frames. The response time for each operation should be optimized to ensure a smooth and seamless user experience.
2. **Scalability:** Vendr should be able to handle a large volume of concurrent users and transactions without experiencing performance degradation. The system should scale

horizontally to accommodate increased traffic during peak periods, such as seasonal sales or promotional events.

3. **Reliability:** The system should be highly reliable, with minimal downtime and service interruptions. Measures should be in place to ensure continuous availability, including redundant servers, load balancing, and automated failover mechanisms.
4. **Database Performance:** The database should be optimized for performance, with efficient indexing, query optimization, and data caching strategies implemented to minimize response times for database operations.
5. **Page Load Speed:** Web pages should load quickly, with minimal latency and page load times. Optimizations such as code minification, image compression, and caching should be implemented to reduce page load times and improve overall performance.
6. **Transaction Processing:** Transaction processing should be fast and efficient, with orders processed promptly and accurately. Payment processing should be secure and reliable, with transactions completed in a timely manner and confirmation emails sent to users promptly upon order completion.

Design Constraints:

1. **Technology Stack Limitations:** Vendr is constrained by the technology stack chosen for development, including the MERN (MongoDB, Express.js, React.js, Node.js) framework. Any design decisions must align with the capabilities and limitations of these technologies.
2. **Third-Party Integration Compatibility:** Vendr relies on various third-party services and APIs for functionalities such as payment processing, email notifications, and authentication. Design decisions must consider the compatibility and integration requirements of these services.
3. **Security and Compliance Requirements:** Vendr must adhere to industry standards and best practices for security and compliance, including data encryption, secure payment processing, and user authentication. Design decisions must prioritize security and ensure compliance with regulations such as GDPR and PCI DSS.
4. **Scalability and Performance:** The design of Vendr must support scalability and performance requirements, allowing the platform to handle increasing traffic and user demand over time. Design decisions must consider scalability challenges such as database optimization, caching strategies, and load balancing.
5. **User Experience Considerations:** Vendr's design must prioritize user experience and accessibility, ensuring that the platform is intuitive, easy to navigate, and responsive

across different devices and screen sizes. Design decisions must consider usability testing, user feedback, and accessibility standards to enhance the overall user experience.

6. **Maintenance and Upgradability:** The design of Vendr should facilitate maintenance and future upgrades, allowing for seamless updates and enhancements to the platform. Design decisions must consider modularity, code maintainability, and version control practices to support ongoing development and improvements.

Non-functional Attributes:

1. **Security:** Vendr prioritizes robust security measures to protect user data, sensitive information, and transactions. Implementation of encryption protocols, secure authentication mechanisms, and adherence to industry security standards ensures data confidentiality and integrity.
2. **Performance:** Vendr is designed for optimal performance, with fast response times, minimal latency, and high availability. Through efficient code optimization, database tuning, and server infrastructure scaling, Vendr delivers a seamless and responsive user experience, even under heavy loads.
3. **Scalability:** Vendr's architecture is built to scale horizontally, accommodating increasing user traffic and data volumes without compromising performance or

reliability. With flexible deployment options and scalable infrastructure components, Vendr adapts effortlessly to evolving business needs and growth demands.

4. **Reliability:** Vendr guarantees high reliability and uptime, minimizing service disruptions and downtime. Redundant systems, failover mechanisms, and automated recovery processes ensure continuous availability, enabling uninterrupted access to the platform for users and administrators.
5. **Accessibility:** Vendr is committed to accessibility, ensuring that the platform is usable and navigable by users of all abilities. Compliance with accessibility standards, such as WCAG (Web Content Accessibility Guidelines), and inclusive design practices ensure equal access to information and functionality for all users.
6. **Maintainability:** Vendr's codebase is structured for maintainability, with clean, modular, and well-documented code that facilitates ongoing development, debugging, and enhancements. Version control, coding standards, and documentation practices ensure ease of maintenance and future scalability.

Project Plan:

1. **Requirements Gathering:** The project plan begins with a comprehensive requirement gathering phase, where stakeholders' needs and expectations are identified, documented, and prioritized. This phase involves conducting user interviews, analyzing competitor platforms, and defining the scope and objectives of the project.

2. **System Design:** Following requirements gathering, the project moves into the system design phase, where the architectural design and technical specifications of Vendr are defined. This phase includes designing the database schema, outlining the user interface wireframes, and selecting the appropriate technologies and frameworks for development.
3. **Development:** With the system design in place, development efforts commence to build the various components of Vendr. This phase involves front-end development using React.js and Redux, back-end development using Node.js and Express.js, database development using MongoDB, and integration of third-party services such as payment gateways and email providers.
4. **Testing:** Concurrent with development, the testing phase ensures the quality and functionality of Vendr through rigorous testing methodologies. This phase includes unit testing, integration testing, and end-to-end testing to identify and resolve any bugs, errors, or issues before deployment.
5. **Deployment:** Once development and testing are complete, Vendr is deployed to a production environment using platforms such as Vercel or AWS. Deployment involves configuring servers, setting up databases, and ensuring proper security measures are in place to protect user data and ensure system stability.

6. Training and Documentation: As Vendr nears completion, training sessions are conducted to familiarize administrators with the platform's features and functionalities. Additionally, comprehensive documentation is provided, including user manuals, technical guides, and troubleshooting resources, to support users and administrators post-launch.

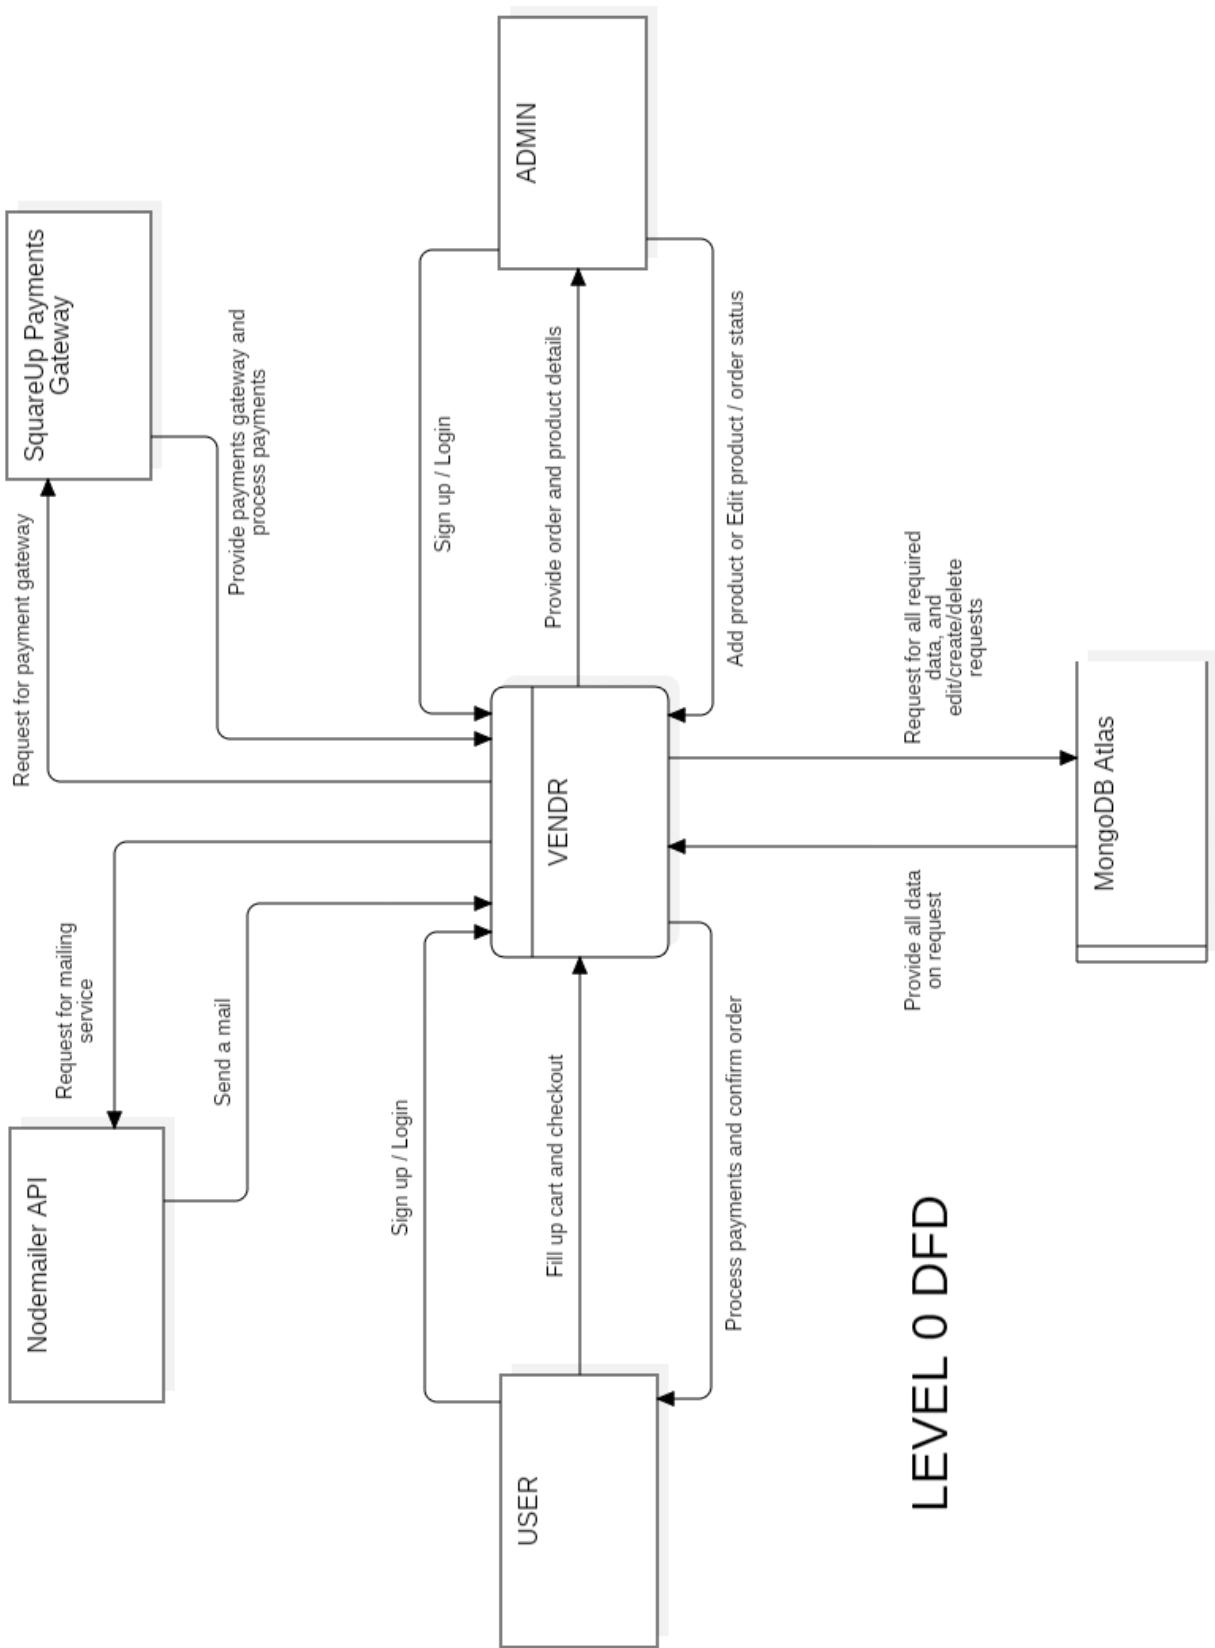

Project Schedule:

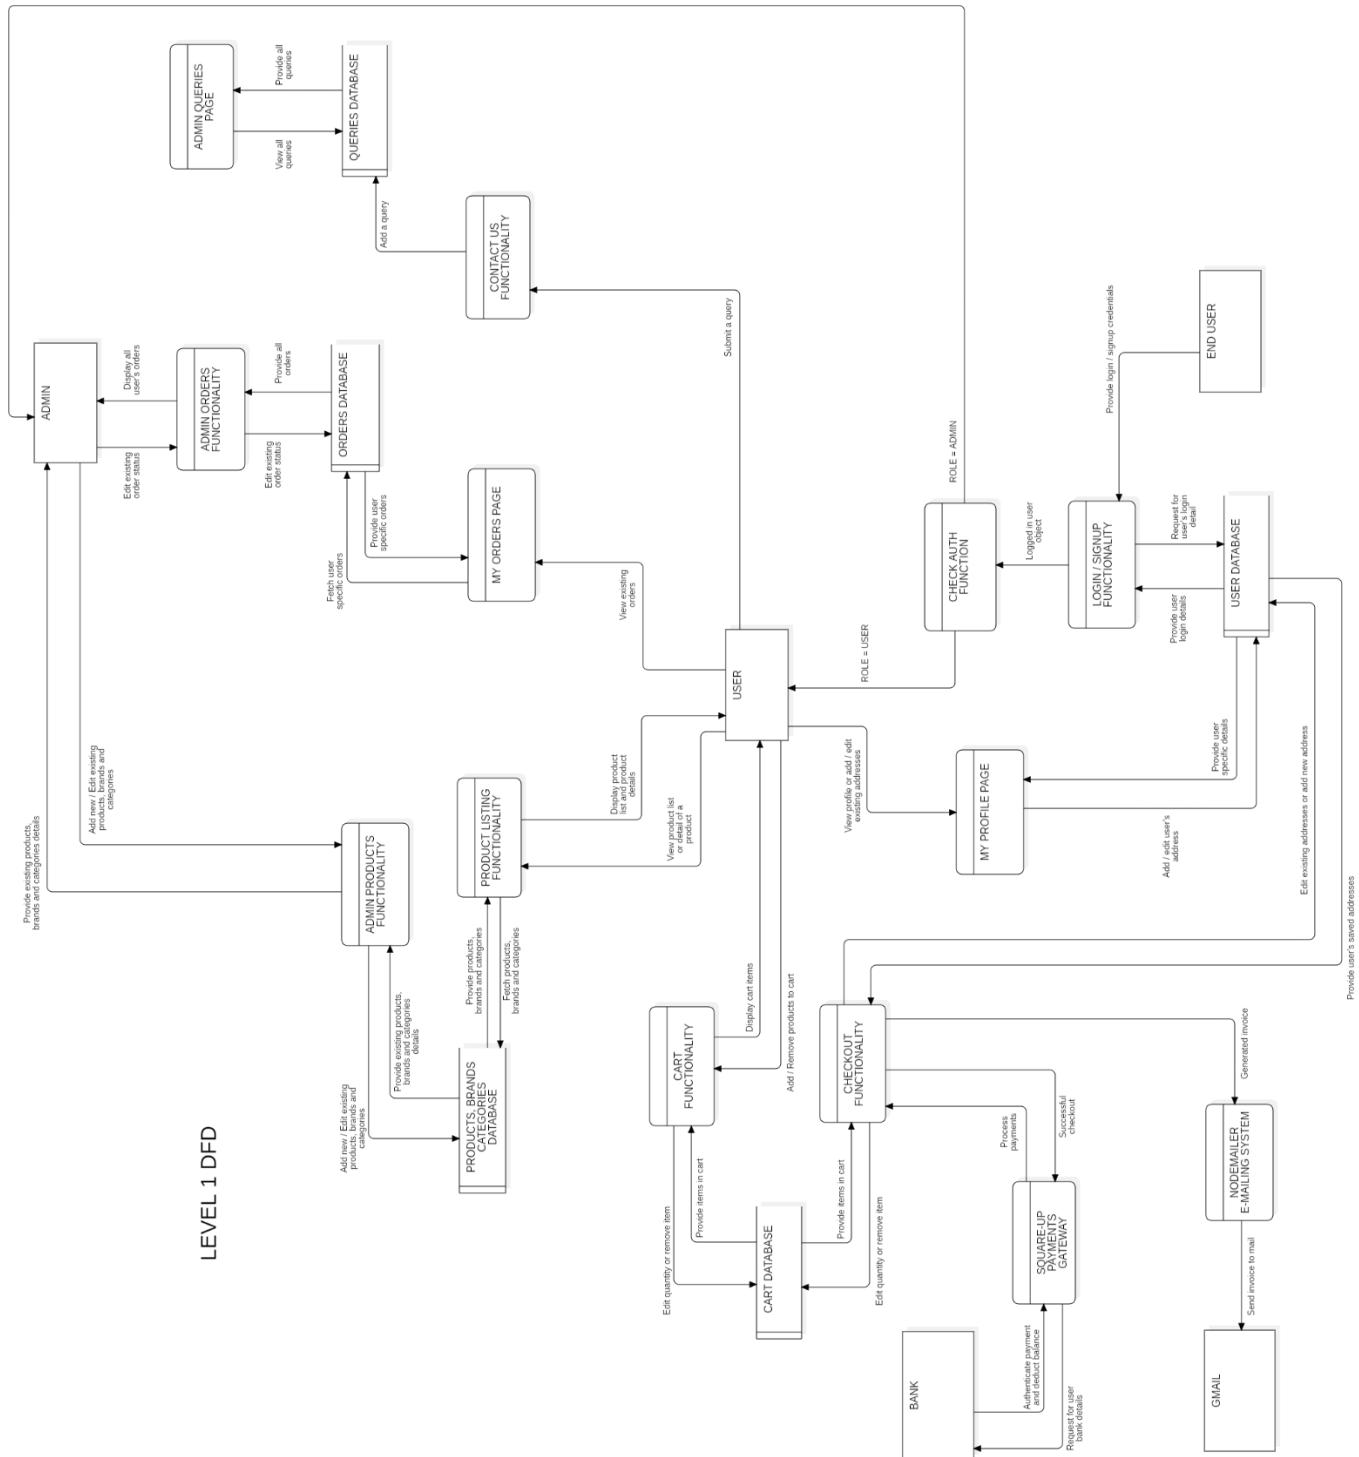

- **Month 1 - Requirement Analysis, Planning, Design and Prototyping:**
 - Detailed requirements gathering and project planning.
 - Create design prototypes, finalize architecture, and set up the development environment.
- **Month 2 - Development of backend and frontend individually:**
 - Backend implementation with Node.js and Express, frontend implementation with React and Redux.
- **Month 3 - Integration and Testing:**
 - Integrate all components, perform thorough testing (unit, integration, and user acceptance testing).
- **Month 4 - Deployment and Launch:**
 - Deploy the application to Vercel, perform final testing, and launch the application. Post-launch monitoring and initial bug fixes.

USE CASE DIAGRAM

MEET THE TEAM

Presenting our dynamic team: Abhik Gupta leads with full-stack expertise, Nishchay Chandok weaves frontend magic, John P Varghese shines in backend brilliance, and Yatin Hooda brings database expertise. Together, we craft unforgettable experiences.

ABHIK GUPTA

Full Stack Web Developer

Leads the project as a full-stack web developer, playing a key role in developing both frontend and backend components using React and Node.js. Responsibilities include seamless integration and design contributions to UI and backend structure.

JOHN P VARGHESE

Back end Web Developer

Has played a pivotal role in crafting all API calls using Express. Additionally, he is responsible for setting up the actual server of the project using Node.js. His efforts also encompass the integration of the backend with the frontend.

YATIN HOODA

Database Engineer

Has made substantial contributions to database management. His role involves efficiently managing and incorporating all data into the actual database for testing purposes. He also has made major efforts in the actual development of backend for the project.

NISHCHAY CHANDOK

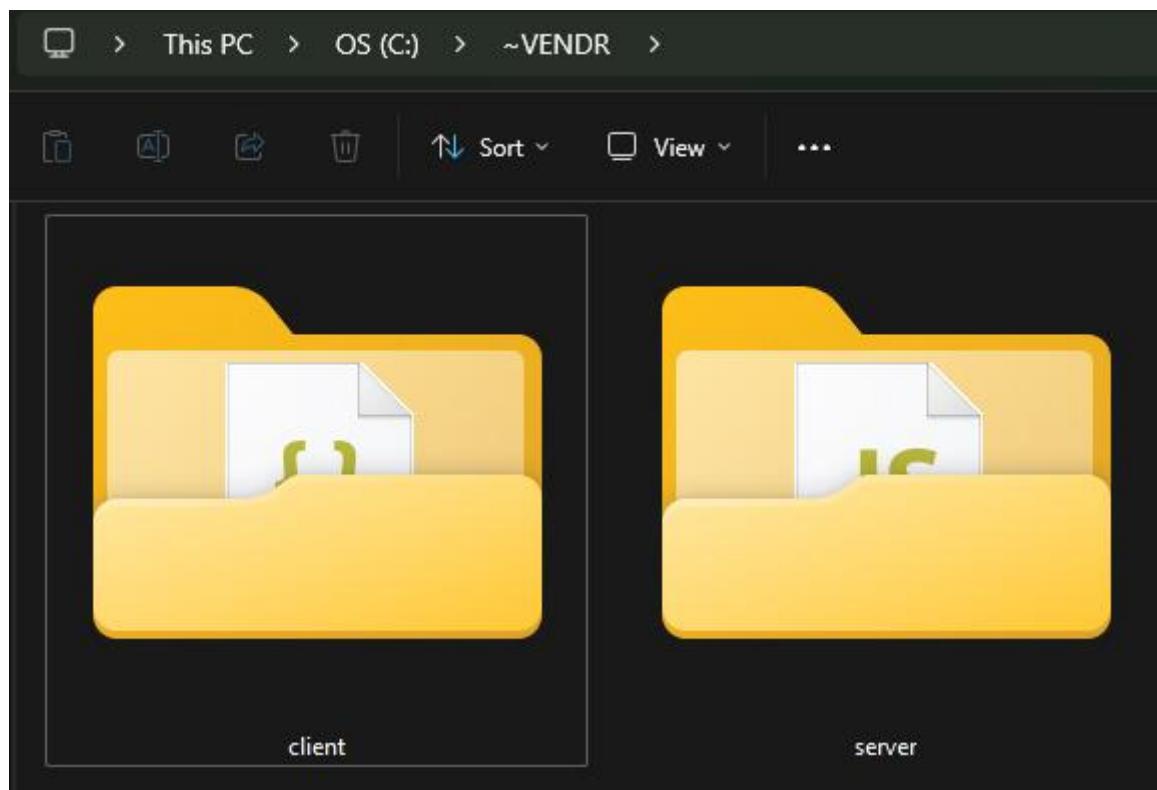

Front End Web Developer

Has been instrumental and really effective in the creation of the actual React app that is both effective and good looking, taking charge of a significant portion of the frontend development.

CODING AND IMPLEMENTATION

</h2>

<p className="text-base text-gray-700">

    The primary objective of "Vendr," a web-based storefront application, is to provide a seamless, efficient, and scalable online shopping platform. By leveraging the MERN framework, Vendr aims to offer both individual users and businesses a robust environment for displaying and managing an extensive range of products. The application will integrate advanced functionalities like secure payment transactions through Stripe, comprehensive product management, and a personalized shopping experience, with an emphasis on high performance and user-friendly interfaces.<br/><br/>

</p>

<p className="text-base text-gray-700">

    "Vendr" is not just a product of technology; it's the culmination of relentless dedication and teamwork. Crafted by the hands and minds of Abhik Gupta, John P Varghese, Yatin Hooda, and Nishchay Chandok, this project embodies the spirit of collaboration and shared vision. Their collective efforts have been the driving force behind the realization of this ambitious endeavor. With each member contributing their unique skills and expertise, "Vendr" has been shaped into a sophisticated and innovative e-commerce solution, poised to make its mark in the digital marketplace.

OUTPUT SCREENSHOTS

Below, we have included comprehensive screenshots that illustrate the various functionalities and user interfaces of our project. These screenshots cover major pages such as the Login page, Signup page, Forgot Password page, Cart page, Checkout page, Payments Gateway page, Order Success page, About Us page, Contact Us page, My Profile page, and My Orders page. Additionally, the screenshots showcase administrative functionalities with the Admin Products page, Admin Queries page, and Admin Orders page. Important screenshots like the invoice received via email and the reset link received via email for password recovery are also provided to give a complete overview of the user and admin experiences within our application.

Login Page

The screenshot shows a mobile application interface for a login page. At the top, there is a dark header bar with various icons for navigation and settings. Below the header, the main content area has a light gray background. In the center, there is a small icon of a smartphone displaying a storefront. To the right of the icon, the text "Sign in to your account" is displayed in a bold, black font. Below this text are two input fields: one for "Email address" and one for "Password". To the right of the password field is a link "Forgot password?". To the right of the email field is a link "Forgot password?". Below the password field is a blue rectangular button with the white text "Log in". At the bottom left of the screen, there is a small text link "Does not have an account? Sign up". The overall design is clean and modern, typical of a mobile e-commerce application.

Signup Page

Home Page

The screenshot shows the Vendr platform's home page. At the top, there is a dark header bar with various icons and a user profile icon. Below the header, the word "Vendr" is prominently displayed. The main content area is titled "All Products" and features a grid of five product cards:

- iPhone 15 Pro Max**: \$1647 (5.5 stars)
- Men Slim Fit Jeans**: \$35 (5 stars)
- Xiaomi 14 Ultra**: \$1647 (5 stars)
- Casual Tshirt**: \$16 (5 stars)
- Galaxy S24 Ultra**: \$1647 (5 stars)

Below the grid, there are two filter sections: "Category" and "Brand", each with a plus sign to add more options.

Product Detail Page

The screenshot shows a product detail page for a 'Roadster' casual t-shirt. The main image at the top displays a person wearing the t-shirt, jeans, and a cap. Below it are two smaller images: one showing the back of the t-shirt with the text 'ROADSTER 1978' and another showing a close-up of the chest area. A large image of the t-shirt is centered below these. The page includes a navigation bar with icons for search, filters, and user profile, and a footer with links for Vendr, Products, About Us, and Contact Us.

About us Page

The primary objective of "Vendr," a web-based storefront application, is to provide a seamless, efficient, and scalable online shopping platform. By leveraging the MERN framework, Vendr aims to offer both individual users and businesses a robust environment for displaying and managing an extensive range of products. The application will integrate advanced functionalities like secure payment transactions through Stripe, comprehensive product management, and a personalized shopping experience, with an emphasis on high performance and user-friendly interfaces.

"Vendr" is not just a product of technology; it's the culmination of relentless dedication and teamwork. Crafted by the hands and minds of Abhik Gupta, John Vargese, Yatin Hooda, and Nishchay Chardok, this project embodies the spirit of collaboration and shared vision. Their collective efforts have been the driving force behind the realization of this ambitious endeavor. With each member contributing their unique skills and expertise, "Vendr" has been shaped into a sophisticated and innovative e-commerce solution, poised to make its mark in the digital marketplace.

Contact us Page

The screenshot shows a contact us page for Vendr. At the top, there's a dark header bar with various icons and links. Below it, the Vendr logo is visible. The main content area has a light gray background. On the left, there's a sidebar with sections for "Tell us what is your issue" and "Your query". The "Your query" section contains a text input field with placeholder text "Enter your issue here". On the right side of the main content area, there are two buttons: "Cancel" and a blue "Submit" button.

Tell us what is your issue
We will try to reach out to you as soon as possible.

VERSION CONTROL AND COLLABORATION

The development journey of Vendr, a comprehensive e-commerce application, reflects the collaborative efforts of Abhik Gupta, Yatin Hooda, John P. Varghese, and Nishchay Chandok. With Git and GitHub serving as the backbone for collaboration and version control, the team navigated through **108 commits** across **35 major versions**, each marking a significant milestone in the application's evolution.

Development phases

- Versions 1.0 - 18.0: Frontend development using React, Redux, and mock data with json-server and MongoDB Compass.
- Versions 19.0 - 23.0: Backend API development and integration with frontend.
- Versions 24.0 - 26.0: Implementation of authentication and authorization using JWT and Passport JS, with password hashing using Bcrypt.
- Versions 27.0: Initiated Stripe integration for payments gateway, but faced internal errors leading to failure.
- Versions 28.0 - 28.3: Deployment of application over Vercel and migration of database to MongoDB Atlas.
- Version 29.0: Integration of Squareup Payments SDK for payments instead of Stripe.
- Version 30.0: Addition of mailing functionality using Nodemailer for forgot password feature.
- Versions 31.0 - 31.3: Bug fixes.

- Version 32.0: Added email functionality for invoice of products bought.
- Versions 33.0 - 33.5: Continued bug fixes.
- Version 34.0: Added final two pages, About Us and Contact Us.
- Version 35.0: Finalized version and documented the project.

The screenshot shows the GitHub repository settings page for 'abhlk2207 / Vendr-Development'. The 'Access' tab is selected, displaying the 'Who has access' section. The repository is set to 'PUBLIC REPOSITORY' and is described as 'This repository is public and visible to anyone.' A green 'Manage' button is present. Below this, the 'Manage access' section lists four collaborators: 'nischaychandok' (Collaborator), 'John Varghese' (Slated as collaborator), 'YatinHooda' (Collaborator), and 'developer-abhlk' (Collaborator). Each collaborator entry includes a red 'Edit' icon. To the right, there's a note about team access controls and discussions for organizations, along with a 'Create an organization' button. The top navigation bar includes links for 'Code', 'Issues', 'Pull requests', 'Actions', 'Projects', 'Wiki', 'Security', 'Insights', and 'Settings'.

CONCLUSION

Throughout Vendr's development, our team has navigated challenges, embraced innovation, and remained committed to delivering a premier e-commerce solution. Reflecting on our milestones, lessons learned, and the transformative impact Vendr aims to make in the digital marketplace, we see a project born from collective effort, dedication, and passion. Vendr stands as a testament to our pursuit of excellence and our drive to exceed customer expectations. With its user-centric design, seamless functionality, and commitment to security, Vendr sets a new standard for online shopping, empowering users to explore diverse products, streamline order management, and receive personalized recommendations.

As we embark on Vendr's next phase, we remain dedicated to innovation, continuous improvement, and customer satisfaction. Our vision extends beyond current capabilities, with plans to implement advanced features, expand into new markets, and embrace emerging technologies. With an unwavering commitment to pushing boundaries and exceeding expectations, Vendr is poised to lead in the evolving world of e-commerce, empowering users, delighting customers, and shaping the future of digital commerce.

FUTURE SCOPE

In our ongoing pursuit of excellence, Vendr continuously explores avenues for growth and improvement. Looking ahead, we envision a future brimming with innovation and enhanced user experiences. With an unwavering commitment to staying at the forefront of e-commerce trends, we are excited to unveil our ambitious roadmap for future development. Below, we outline our forthcoming enhancements and features, designed to elevate Vendr to new heights of functionality, accessibility, and customer satisfaction.

1. **AI-Powered Recommendations:** Implement artificial intelligence to offer personalized product recommendations based on user behavior, past purchases, and browsing history. This could increase sales and improve customer satisfaction by making the shopping experience more relevant and tailored to individual preferences.
2. **Multi-vendor Marketplace:** Expanding Vendr to support multiple vendors can significantly broaden its scope. This would allow various sellers to register on the platform, list their products, and manage their inventory independently, creating a diverse marketplace for users.
3. **Augmented Reality (AR) Integration:** Develop AR capabilities to allow customers to visualize products in their own environment before making a purchase. This could be particularly useful for items like furniture and home decor, enhancing consumer confidence in their buying decisions.
4. **Expansion to International Markets:** Adapt the platform for international use by incorporating multi language support, multi-currency pricing, and local payment

gateways. This expansion would broaden the customer base and increase revenue opportunities.

5. **Mobile Application Development:** Create a dedicated mobile app for Vendr to provide users with a more convenient, fast, and accessible way to shop and manage their accounts from their smartphones, potentially increasing user engagement and sales.
6. **Blockchain for Enhanced Security:** Explore the use of blockchain technology to enhance transaction security and transparency, especially for high-value transactions and to protect against fraud in payment processes and supply chain documentation.
7. **Voice Commerce Integration:** Integrate voice-activated commerce capabilities, allowing users to search for products, place orders, and manage their accounts through voice assistants like Amazon Alexa, Google Assistant, or Apple Siri. This feature could tap into the growing market of users who rely on smart home devices.
8. **Enhanced Analytics and Insights:** Continuously improving analytics capabilities to gather actionable insights into user behavior, sales trends, and market dynamics can inform strategic decision-making and drive business growth. Implementing advanced analytics tools and predictive analytics can unlock valuable insights for optimizing marketing strategies, product offerings, and user experience.
9. **Dynamic Rating System:** In the future, Vendr aims to implement a dynamic rating system to enhance user engagement and provide more accurate product feedback. Currently, the rating system is static, but the plan is to introduce features such as user reviews, star ratings, and real-time feedback mechanisms. This dynamic rating system will enable users to share their experiences, opinions, and insights about products, fostering a vibrant community-driven environment and aiding other shoppers in making informed purchasing decisions.
